

PROTOSPHERE®

The Virtual World for Collaboration

ProtonMedia's ProtoSphere is the premier virtual world for collaboration. It features VoIP and text chat, video, application sharing, and Web 2.0 tools like social networks and blogs. ProtoSphere is the communication solution for telecommuters, global meetings, and distance learning.

Minimum System Requirements

| Hardware: | Specification: |
|------------------|---------------------------------------------------|
| Processor | 2.4 GHz Pentium class |
| Memory | 1 Gig system RAM |
| Display Size | 1024 x 768 |
| Color Palette | 32 bit |
| Video | 3D-capable video card with 32 MB of Video RAM |
| Connection Speed | Broadband |
| Software: | |
| OS | Windows XP (SP2), Direct-X ver. 9.0c or higher |
| Browsers | Internet Explorer 5 or higher |
| Plug-ins | FLASH 8 or higher |

3D Virtual World

ProtoSphere is a secure, private 3D virtual world system populated with avatars that you control. These avatars create a sense of presence and life that's unmatched by simple presentation systems. When you commission a ProtoSphere world, you decide how it will look and function. The system is designed so that you control what 3D objects and graphics exist in the world.

VoIP

Holding a meeting without being able to talk to one another is almost useless. That's why ProtoSphere has Voice over Internet Protocol (VoIP) built right in. ProtoSphere's implementation isn't like the VoIP you experience with some of the instant messenger tools where you can talk to one person at a time. Instead, ProtoSphere's VoIP allows you to speak with everyone in the meeting room just like you do in real life. You can also select people to have private conversations with and ProtoSphere's VoIP is encrypted to protect your business.

Text Chat

As everyone knows, sometimes a quick IM (instant message) is all that's needed to get the job done. Whether you need to ask a quick question of a colleague or have a longer conversation with your team, ProtoSphere's chat system is up to the task. The system has both public and private modes so you can text everyone in the room with you or just one person. Most importantly, ProtoSphere's chat system is secure and evaporative. When you end a conversation session, the messages are all erased.

Social Networking

Social networking is changing how businesses operate both internally and externally. ProtonMedia saw the importance of social networking and built it right into ProtoSphere in the most easy to use and logical way possible. Every avatar links you to a person's social networking profile where you can see their job position, the teams and projects they've joined, as well as their blog and Wiki postings. ProtonMedia's social network enables you to find the expertise in your company when you need it most.

Application Sharing

Collaboration just isn't possible without everyone being able to see and share the same documents. ProtoSphere allows you to share with everyone in the room the programs, documents, and files you need for your work. ProtoSphere even allows you to give control of the file to someone on your team so they can add their thoughts directly.

LMS connectivity

ProtoSphere not only enables collaboration between the employees of your company but it also serves as an ideal training platform. Whether you want to launch existing training pieces or deploy new training in-world, ProtoSphere allows you to record learner status information in your LMS. Contact ProtonMedia to discuss your needs and objectives.

Video

In those situations where communicating with VoIP, text chat and avatars isn't enough, ProtoSphere also supports video. You can display live video from video conferencing and telepresence systems or stored video files from your server.
